

The Next Generation of Datto

Business Continuity Built From the Ground Up

Datto's extended family of hybrid cloud-based backup, disaster recovery (BDR) and business continuity solutions are built for businesses of every size. The solutions are customized for the Channel, with pricing options and ease of transition as customers' data and storage needs grow.

The robust software platform includes instant local and off-site virtualization, and Datto's proprietary Inverse Chain Technology™ and Screenshot Backup Verification.™ The devices feature hot-swappable drive bays and solid state OS drives. Datto SIRIS 2 is available in both a physical and virtual format.

Datto defines innovation, once again.

Business Continuity Solutions Designed for Maximum Functionality, Scalability and Profit

DATTO SIRIS 2

Enterprise Business Continuity Built from the Ground Up

Datto SIRIS 2 delivers the most aggressive Recovery Time Objective (RTO) of any backup, disaster recovery (BDR) and business continuity solution available in the Channel. No surprise as it's the only BDR solution designed and built specifically to mitigate downtime for businesses and establish a viable recurring revenue model for MSPs. Better yet, Datto SIRIS 2 is available in four distinct product lines, based on your specific needs:

- Datto SIRIS 2 Business: 500GB to 2TB
- Datto SIRIS 2 Professional: 1TB to 5TB
- Datto SIRIS 2 Enterprise: 5TB to 36TB
- Datto Virtual SIRIS

DATTO ALTO XL

Harness the Power of the Datto Cloud

Datto ALTO XL is the new, cost-effective way for businesses of all sizes to get comprehensive protection against downtime. Datto ALTO XL is easy to use and inexpensive to scale. The solution comes with solid state OS drives, end-to-end encryption, and RAID for added redundancy. It's big power at an attractive price point.

- Datto ALTO XL: 1TB to 3TB
- Datto ALTO XL Professional: 6TB to 24TB

DATTO ALTO 2

The Only Continuity Solution Designed for Small Business

Datto ALTO 2 gives MSPs the power to win over the small business market. Datto ALTO 2 is the first, and only, business continuity solution built specifically for the unique demands of the small business market. The solution features Hybrid Virtualization, Screenshot Backup Verification, and a new hardware configuration to maximize reliability.

DATTO NAS

Smart, Scalable Storage—Connected to the Cloud

Datto NAS is the only network-attached storage device designed with the needs of Solution Providers in mind. Two unique features are its ability to build and take snapshots of network shares and to sync these shares to the secure Datto cloud. Datto NAS is the perfect complement to the Datto family of Business Continuity solutions, providing extra storage with a superior level of protection.

The Datto Difference—What's Inside

Instant Virtualization, On and Off-Site

Backups can be virtualized locally to the Datto device or to the secure Datto cloud, instantly, with the click of a button. Should a local disaster occur, a business can continue as usual in the Datto cloud. Even while virtualized, systems can perform a normal backup schedule to both the Datto device and to the Datto cloud.

Local virtualization included on:

Off-site virtualization included on:

Hybrid Virtualization

This is the combination of instant off-site virtualization and the single click connectivity of instant local virtualization.

Included on:

Screenshot Backup Verification

No more guessing if your backup is working properly. Datto boots backups as virtual machines, capturing an image of the login page to give you visual proof that your data has been successfully backed up. An industry first.

Included on:

Inverse Chain Technology™

This proprietary technology eliminates broken backup chains. Each time a backup occurs data is converted directly into a virtual machine, with the most recent backup image always being the base image. Data is always available immediately, both on and off-site.

Included on:

Backup Insights™

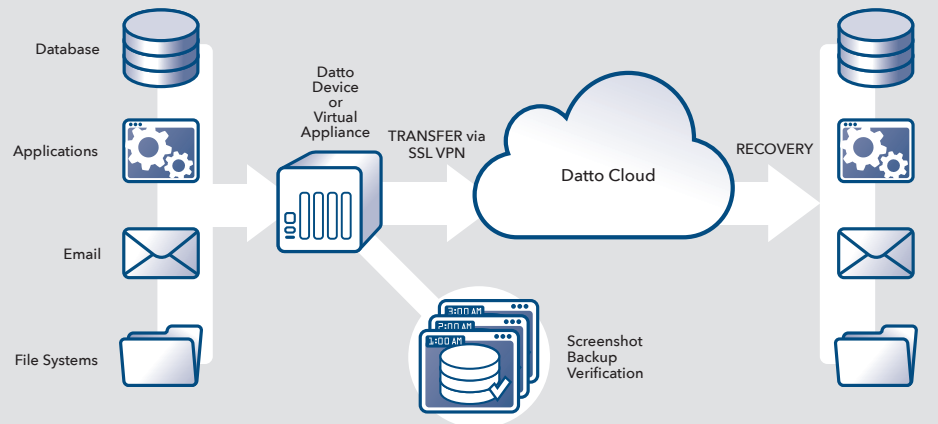

This groundbreaking proprietary technology allows you to identify file or application changes between any two backup points. You can easily find that deleted folder or determine which files a virus affected.

Included on:

Datto's Hybrid Cloud Structure

All Datto solutions are built with hybrid cloud functionality, providing quick restores and complete data protection.

End-to-End Encryption

All data is protected by AES 256 encryption both in transit and in the cloud. Datto partners have the option to encrypt data locally, and pass phrases can be specified per appliance or per protected machine to meet compliance regulations.

Included on:

Better Bare Metal Restore

Restore full machines quickly and efficiently through our USB Bare Metal Restore process. Go from physical machines to virtual (P2V) or vice versa with our unique dissimilar hardware tool that allows for maximum flexibility when restoring. No drives or cables needed as the system can run completely over the user's network.

Included on:

Centralized Management

All Datto solutions are controlled through a central, easy to use web interface. Partners can configure devices, schedule backup reports, monitor off-site amounts, set up alerts, access marketing support, and more.

Included on:

Award-Winning Support

Datto Tech Support is the only channel-based BDR support that is 100% in-house (all US-based Datto employees), available 24/7/365.

Included on:

Broad Operating System Support

Datto supports Microsoft Windows operating systems for almost any Windows PC or server that is still production today. Support currently ranges from Windows 2000 to Windows 8 and Server 2012. Granular recovery is also available for Exchange and Sharepoint servers.

Included on:

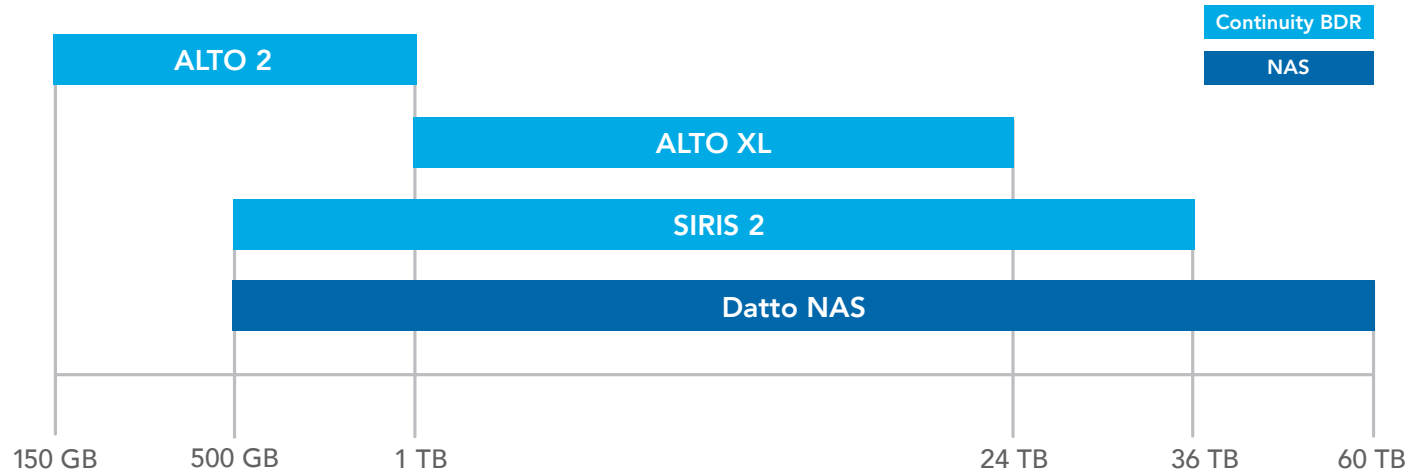

Multiple Appliance Platforms

Datto SIRIS 2 now supports VMware as an appliance platform. Our Intelligent Business Continuity solution can now be purchased as a virtual appliance on virtual infrastructure in addition to our physical hardware.

Included on:

Solutions for businesses of any size:

	Datto SIRIS 2	Datto ALTO XL	Datto ALTO 2	Datto NAS
