

# UNIVERGE® SV8000 Series PC Pro/WebPro

Fulfilling the promise of UNIVERGE®360

The UNIVERGE SV8000 Series PC Pro/WebPro is a communications system management tool that provides you with the ability to manage your phones and simplify administration. As part of NEC's UNIVERGE360 approach of putting people at the center of communications, PC Pro/WebPro connects people with the information and tools they need to keep businesses running smoothly

PC Pro/WebPro allows you to manage your communications system simply and easily. With PC Pro/WebPro, programming is done via three methods – Standard View, Wizards and System Data. These views are accessible through easy to use menus or one-click icons.

## *Program Using Standard View, Wizards or System Data View*

SV8000 Series PC Pro/WebPro provides you with multiple programming interface options including a Standard View, Wizards, and a System Data view.

### ***At a Glance***

- Program using Standard View, Wizards or System Data View
- View the modification history
- Configure settings and schedule firmware updates remotely
- Use additional features to monitor, archive and troubleshoot

- **Standard View** combines related settings on one screen, allowing quick setup of high-level tasks. Settings on these screens work together to provide users a better understanding of screen relationships. They are identified by names which clearly indicate their functions.
- **Wizards** can be used to simplify programming by automating the completion of common tasks. Wizards chronologically group system data and guide users step by step through the feature setup process.
- **System Data** screens are intended for advanced users who can use them to directly set advanced configurations categorized by server settings.

## *View the Modification History*

PC Pro keeps a record of all modifications made to a database file in the file's Modification History. Users can easily view this file to quickly see any changes that have been previously implemented.

## *Configure Settings and Schedule Firmware Updates Remotely*

PC Pro/WebPro helps make the management process easier by allowing users to remotely configure phone settings and schedule automatic firmware updates.

## *Use Additional Features to Monitor, Archive and Troubleshoot*

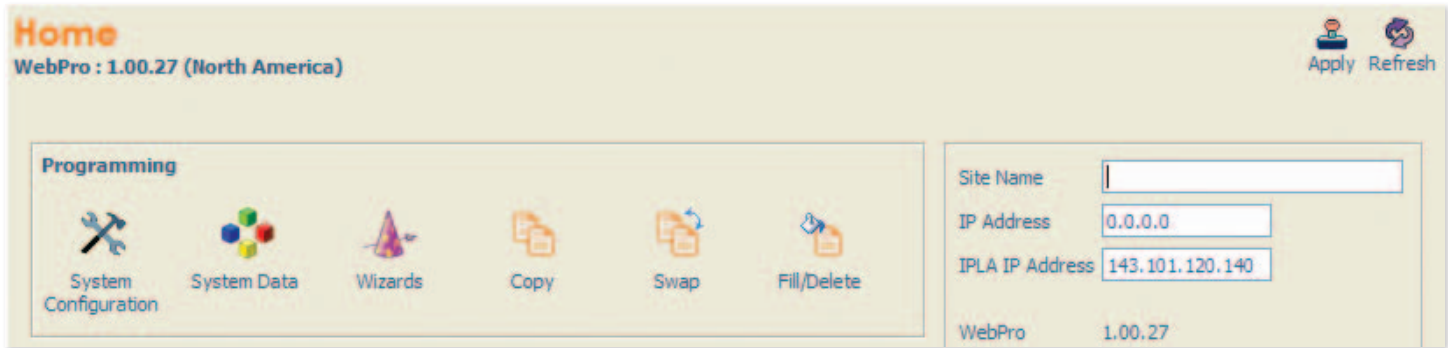

PC Pro also offers additional features. For example, users can:

- Capture low-level messages and problem-solve using Debug Terminal
- Generate reports for monitoring settings
- Archive settings to specified files

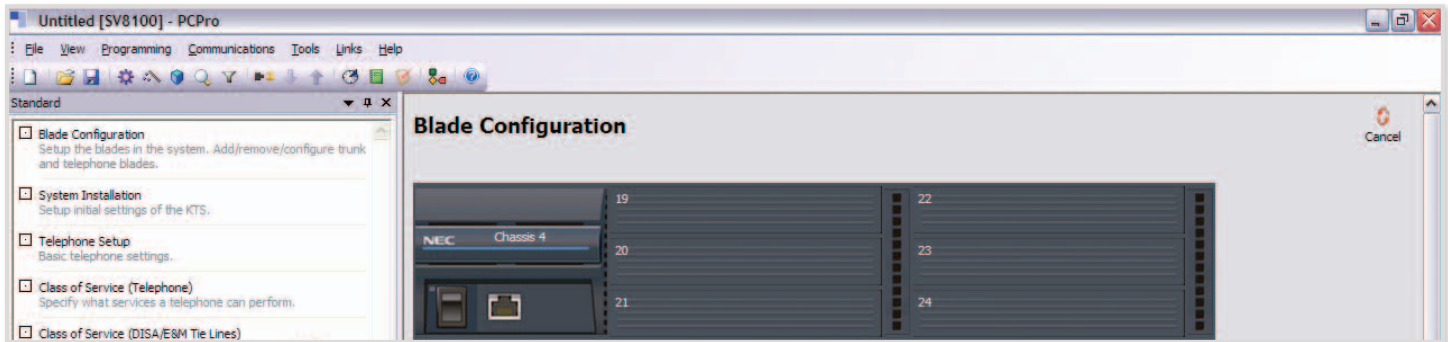

## System Requirements

<b>CPU</b>	Pentium III 598MHz (minimum) Pentium 4 2.5GHz (recommended)	<b>Disk Space</b>	35MB for PCPro (minimum)
<b>Memory</b>	128 MB of RAM 256 MB (recommended)	<b>TCP Port</b>	<ul style="list-style-type: none"> <li>TCP port 8000 must be open between the terminal and the host PC for uploading/ downloading via LAN.</li> <li>PCPro/WebPro TCP port is set for 8000 at default, but can be changed via WebPro using PRG 90-38-02.</li> <li>PRG 90-38-02 is not accessible from Phone Programming or PCPro.</li> <li>TCP port 5963 is required to be open if the Debug Terminal is going to be used.</li> </ul>
<b>OS</b>	Microsoft Windows 2000, Microsoft Windows XP, or Microsoft Vista		
<b>Other</b>	Microsoft Internet Explorer 6.0 or higher		
<b>Communication Port</b>	LAN or Modem
